

EDIssecure Driver

Quick Start -- Installation

As follows, short instructions how to install our **EDIssecure Driver** and what to consider if one of our older drivers (**EDIssecure Connect** or **MDS**) is already installed on the PC.

System Requirements: WinXP, Win7, Win8.1, Win10 -- (MS Server OS or Print Server are not supported)

Installation files: EDIssecure Driver **Full Install** package (70 MB) resp. EDIssecure Driver **Updates** (ca. 7 MB)

- **First ever (initial) driver installation** -- i.e no EDIssecure Connect resp. MDS is installed:
 - Use our **Full Install package** which contains all necessary Windows runtimes.
 - Execute its *Setup.exe*
 - Hint: If missing, all required Windows runtimes will get installed which might require a Windows reboot. -- In this case, please start the EDIssecure Driver *Setup.exe* afterwards once again.
- **Update** an already existing older version of **EDIssecure Driver**:
 - Execute our small **Update MSI file**.
 - Confirm the Windows reboot after the Update installation has finished.

- **Replacement of** already existing older driver generation (**EDIssecure Connect** or **MDS**):

Important: The installation of our newest driver requires to uninstall those older drivers!

Due to technical reasons, there exists no direct upgrade path and we could not provide an easy migration. We apologize for this inconvenience.

In case of EDIssecure Connect:

- Delete all existing EDIssecure Connect printer Groups in the "*Administration Center*". (Do NOT remove them via *Windows > Devices & Printers*!)
- Uninstall EDIssecure Connect via *Windows > Start > Control Panel > Uninstall software*
- reboot Windows
- Execute the Setup of the EDIssecure Driver installation files.
- Hint: Our EDIssecure Connect main modules got renamed for the MDS and the EDIssecure Driver
 - "*Administration Center*" --> "*Device Configurator*"
 - "*Dispatcher*" --> "*Job Monitor*"
 - "*LogSaver*" --> "*Logfile Saver*"

In case of **MDS**:

- Delete all existing MDS printer Groups in the "*Device Configurator*". (Do NOT remove them via *Windows > Devices & Printers*!)
- Uninstall EDIsecure Connect via *Windows > Start > Control Panel > Uninstall software*
- reboot Windows
- Execute the Setup of the EDIsecure Driver installation files.

Finally, create your EDIsecure Driver printer Groups in the "*Device Configurator*". (In *Windows > Start > Programs > Matica > EDIsecure > ...*)

Hint: If no EDIsecure printer Group exists, then our "*Printer Wizard*" tool will launch automatically. Follow its directions to create your first printer Group. Further EDIsecure printer Groups can be created in the "*Device Configurator*" with "*Add Printer*".

Best Regards
