

HoloKote®

The Professional Choice For Security

HoloKote® technology is a secure watermark that is frosted onto the card surface during the normal print cycle using standard consumables (dye film and cards).

The HoloKote® print process produces a watermark-like layer that can be visually verified when the card is tilted in the light. For even greater security, HoloPatch cards combined with a HoloKote provide a distance-visible security mark allowing a security guard or colleague to easily verify badge authenticity. It's the ultimate in card security simplicity.

Custom HoloKote watermarks are ordered separately.

Custom HoloKote®

For enhanced visual security, Custom HoloKote® enables an organisation to implement their own personalised logo or other security design. Custom HoloKote® is printed in a 4x6 grid pattern across the card surface.

Custom HoloKote® Flex™

Custom HoloKote® Flex offers the highest level of HoloKote® security by enabling the customised watermark to be printed anywhere across the entire card surface.

HoloPatch®

HoloPatch® card stock is enhanced with a highly reflective gold 'super diffuser' foil square that intensifies the visibility of any HoloKote® logo.

Card Printers, it's what we do.
